

Engineering

At Stone Protective Solutions all our engineering services are provided by partner company Stone Security Engineering.

Based in Washington DC and New York City, Stone Security Engineering specialize in protecting people and property from accidental and manmade hazards. Focusing on:

- blast resistance, security and safety engineering and design;
- predicting and mitigating intentional or accidental hazards from explosions, fires and toxins;
- security and blast vulnerability assessments

...their engineers have participated in multi-hazard vulnerability, threat, and risk assessments for more than 200 facilities and abnormal loading design for more than 300 buildings and structures around the world.

This ensures that you get the best blast protection needed for your facility.
